

## A VIDEO WEBSITE FOR VETS

With the Advancement in technology, learning & teaching has gone through many major changes in the last few decades. With the advent of computers, information system and networking, world has become a virtual classroom where everyone can learn from each other.

Using such technologies, a video website for learning / teaching of vets has been prepared by Dr. Rajesh Banga (West Indies). This website can be assessed at [www.vetvideos.com](http://www.vetvideos.com). This website is unique and first of its kind in the world with a series of lectures on various aspects of veterinary medicine, delivered by experts of the field. These videos are of particular importance to candidates preparing for veterinary licensing exams of various countries.

This website will be an important tool for continuing education of the veterinarians. Another aim of providing online veterinary educational videos is to help vets and students who away from institutional libraries or are in the underprivileged institute / countries. Undoubtedly, students will be a major group benefited with this site but it not an alternative to the traditional classrooms, books and teachers. Hope these online educational videos will help to further advance the veterinary profession for betterment of speechless animals.
